FinalApp

Project Description:
Create an app that will be able to track your Spotify data and tell you your trends for the month. It will most likely be telling you your most listened to artist, what genres, and depending on the difficulty, try to suggest new songs for you to listen to. I will try to implement a way for it to display graphs, trends, and lists of artists.

Frameworks/Packages:
King Fisher, Animations, SwiftyJSON

Database Setup:

Collections: Users
Users:
- String: Nicknames
- String: Spotify information

Top Artists for the Month
